# KIKI Agent™

## Autonomous LTV Campaign Execution Platform

A STOREGRILL INC LTD Company — Registered in England & Wales

### The Problem

Digital advertising is broken by design.

Ad platforms optimise for *raw conversion events* — a £149 order sent as a £149 signal. The platform's algorithm sees a low-value customer and allocates budget accordingly. But that same customer may be worth £639 over 90 days. The platform never knows.

Every advertiser using Meta, Google, TikTok, or any major platform is leaving 3–4× of addressable lifetime value on the table because the signal they send is the transaction value, not the predicted customer value.

The result: **CPA optimisation becomes a race to the bottom.** Advertisers compete for the same high-intent buyers while undervaluing the customers who would generate the most long-term revenue.

### The Solution

KIKI Agent intercepts every conversion server-side, applies a proprietary ML model that predicts 90-day LTV in under 38ms, and enriches the signal before it reaches the ad platform. The platform sees the *predicted lifetime value* — not the raw order total — and optimises toward actual customer worth.

**Core capability:** A £149 order becomes a £639 signal. The bidding algorithm immediately recognises higher-value lookalike audiences, allocates more budget where LTV is highest, and deprioritises segments with low predicted retention.

### Technology

KIKI Agent is a production-deployed, multi-agent AI system:

| Component              | Technology                                         | Performance                       |
|------------------------|----------------------------------------------------|-----------------------------------|
| LTV Prediction         | Proprietary ensemble ML model                      | R <sup>2</sup> =0.91, 38ms median |
| AI Routing (SyncBrain) | 7-model gateway (GPT-4o, Claude, Gemini, LLaMA...) | 12ms routing latency              |
| Fast Bidding           | Groq Llama 3.1 8B                                  | <200ms response                   |
| Heavy Processing       | Azure OpenAI GPT-4o / GPT-4o-mini                  | 30s max, tiered                   |

| Component       | Technology                                  | Performance                                 |
|-----------------|---------------------------------------------|---------------------------------------------|
| Event Bus       | Apache Kafka (14 topics, 82 event types)    | Real-time                                   |
| Data Layer      | PostgreSQL (Neon) + better-sqlite3 fallback | Multi-tenant                                |
| Infrastructure  | Azure Container Apps, ACR, Bicep            | 99.9% SLA-ready                             |
| Fraud Detection | IP + fingerprint + velocity scoring         | 99.2% detection rate, 0.03% false positives |

Six autonomous AI agents operate continuously within configurable guardrails:

- 1. **Bidding Agent** — Cross-platform bid optimisation with LTV-aware day-parting
- 2. **Creative Agent** — Fatigue detection and AI-generated replacement creatives
- 3. **Smart Pacing Agent** — Budget allocation across campaigns and platforms
- 4. **Signals Agent** — CAPI enrichment, deduplication, and delivery
- 5. **SyncBrain Agent** — Multi-model routing with cost-quality optimisation
- 6. **OaaS Agent** — Automated operational task execution

Business Model

KIKI Agent operates a dual-revenue SaaS model:

1. Platform Subscription (monthly recurring)

- **Growth:** £599/mo — 1 platform, 3 campaigns, 25K AI decisions
- **Scale:** £1,799/mo — 5 platforms, unlimited campaigns, 100K AI decisions
- **Enterprise:** From £4,999/mo — all platforms, custom limits, dedicated infra

2. Usage-Based Fees (metered)

- AI decisions overage: £0.008/decision
- Signal enrichment overage: £0.04/enriched conversion
- Creative generation: £15/creative bundle (AI-generated copy + image prompt)

Target Gross Margin: 82% (Year 1) → 88% (Year 5) — AI API costs scale sub-linearly

Market Opportunity

| Metric                                         | Value   |
|------------------------------------------------|---------|
| Global digital ad spend (2026)                 | \$745B  |
| Ad tech / bid management TAM                   | \$18.2B |
| Serviceable market (D2C £10M–£250M + Agencies) | \$3.4B  |
| Target customer count (Year 5)                 | 1,200+  |
| Implied market share (Year 5)                  | 0.08%   |

Key tailwinds:

- Privacy regulation (GDPR, CCPA) is killing third-party signals — server-side CAPI is mandatory
- AI-native ad tech is the fastest-growing segment (CAGR 32%)
- Meta's CAPI mandate means every advertiser must run server-side events
- LTV modelling is the single highest-leverage optimisation available to performance advertisers

Competitive Moat

1. **Prediction latency:** 38ms median LTV inference — fast enough to run inside the CAPI response window
2. **Multi-agent architecture:** Not a single model — six specialised agents that cross-optimize
3. **Platform breadth:** 14 connectors (Meta, Google, TikTok, LinkedIn, YouTube, Snap, Pinterest, Amazon DSP, Reddit, DV360, X, TradeDesk, Criteo, AppNexus)
4. **Fraud-before-enrichment:** IVT blocking occurs *before* LTV enrichment, preventing model poisoning
5. **Real-time arbitrage:** Cross-platform budget shifts triggered by competitor pricing signals
6. **Bundle of 42 dashboard surfaces:** Not an API — a full command centre with SyncBrain AI chat

Traction & Milestones

| Milestone                   | Status                         |
|-----------------------------|--------------------------------|
| Product v2.0.0              | ✔ Live in production           |
| 42 dashboard pages          | ✔ Built and deployed           |
| 75+ API routes              | ✔ All live                     |
| 146 passing tests           | ✔ CI/CD ready                  |
| 6 AI agents                 | ✔ Operational                  |
| 14 platform connectors      | ✔ Built                        |
| Fraud detection engine      | ✔ Live                         |
| Creative fatigue detection  | ✔ Live                         |
| Google SSO & password reset | ✔ Live                         |
| SMTP email service          | ✔ Ready (awaiting credentials) |

Financial Highlights (5-Year Summary)

| Year | Customers (EOP) | ARR    | Revenue | Gross Margin | EBITDA | Cumulative Cash |
|------|-----------------|--------|---------|--------------|--------|-----------------|
| 1    | 18              | £198K  | £124K   | 82%          | -£41K  | -£41K           |
| 2    | 65              | £786K  | £492K   | 85%          | £102K  | £61K            |
| 3    | 220             | £2.64M | £1.72M  | 87%          | £612K  | £673K           |
| 4    | 540             | £6.48M | £4.56M  | 88%          | £1.89M | £2.56M          |

| Year | Customers (EOP) | ARR    | Revenue | Gross Margin | EBITDA | Cumulative Cash |
|------|-----------------|--------|---------|--------------|--------|-----------------|
| 5    | 1,200           | £14.4M | £10.4M  | 88%          | £4.62M | £7.18M          |

Breakeven achieved in Month 15. Cash-flow positive from Month 18.

The Ask

KIKI Agent is seeking:

**Pre-Seed (Current — Q3 2026):** £350K

- 12-month runway
- Engineering (1 senior full-stack), sales (1 UK BDM), compliance (legal)
- SEIS-eligible — 50% income tax relief for UK angel investors

**Seed (Q3 2027):** £1.5M

- 18-month runway
- Scale engineering team, expand sales to EU, launch self-serve onboarding
- Targeting £1M+ ARR at raise

Team

**Ariyo Dolapo** — Founder & CEO

10+ years in digital industry. Built KIKI Agent from concept to production single-handedly — 75+ API routes, 6 AI agents, 42 dashboard surfaces, production deployment on Azure. Deep expertise in ad-tech infrastructure, real-time bidding systems, and AI model routing.

**Seeking:** UK-based Co-Founder (Operations & Revenue) to lead commercial strategy, UK entity setup, GDPR compliance, investor relations, and customer acquisition. See Co-Founder Term Sheet for details.
