1. Executive Summary

KIKI Agent™ is an autonomous LTV campaign execution platform that intercepts every conversion server-side, predicts 90-day customer lifetime value in 38 milliseconds, and enriches the signal sent to ad platforms — transforming a £149 order into a £639 optimisation signal.

The platform delivers six autonomous AI agents, 14 ad platform connectors, real-time fraud detection, and 42 dashboard surfaces for complete campaign command-and-control. It is production-deployed on Azure, processing live traffic across all major platforms.

Founded by Ariyo Dolapo (10+ years digital industry), KIKI Agent is a STOREGRILL INC LTD company registered in England & Wales. The product is fully built (v2.0.0), deployed, passing 146 tests, and ready for commercial go-to-market.

Key Metrics (5-Year Target):

- Year 5 ARR: £18.2M

- Year 5 EBITDA: £10.3M (56% margin)
- Year 5 Customer Count: 800+
- Breakeven: Month 18
- Gross Margin: 82% → 88%

2. The Problem – Signal Degradation in Digital Advertising

2.1 The Core Failure

Digital advertising platforms optimise toward *raw conversion events* — the transaction value they receive in the pixel or CAPI call. When a customer places a £149 order, the platform receives £149 as the conversion value. The bidding algorithm optimises toward acquiring more £149 customers.

But that customer's true value over 90 days may be £639. The platform never knows. Every single advertiser operating without LTV enrichment is consequently **undervaluing their best customers by 3–4x** and systematically **overbidding for low-value, non-retaining segments**.

2.2 The Cost of Bad Signals

Metric	Without KIKI	With KIKI
Customer value signal	Raw order (e.g., £149)	Predicted LTV (e.g., £639)
Lookalike audience quality	Based on order value	Based on predicted lifetime value
Bid optimisation toward	High AOV (not high LTV)	High retention and repeat rate
CPA optimisation	Race to bottom	Race to sustainable unit economics
Return on Ad Spend	Baseline	3–4x improvement on best customers

2.3 The Technical Failure Mode

Ad platforms operate on a *last-event attribution model* for value optimisation. The problem is structural:

1. **Event-level only:** Platforms see individual transactions, not customer journeys
2. **No retention signal:** There is no mechanism for a platform to know if a customer will repurchase
3. **CAPI mandates:** Privacy regulation is pushing all events to server-side — creating both a compliance burden and an opportunity for enrichment
4. **Fraud poisons the model:** Bot traffic generates false conversions. If these are enriched, the model learns to optimise toward bots. Enrichment must happen *after* fraud detection.

2.4 Market Pain Points

- **Advertisers:** 68% of D2C brands report declining ROAS on Meta and Google (2025–2026). CPA has risen 37% across platforms since 2022.
- **Agencies:** 73% of performance agencies manually adjust bids across platforms — KIKI automates this.
- **Enterprise:** In-house media teams managing £50M+ ad spend need granular LTV data at the bidding level — none of the major platforms provide this natively.

3. The Solution – LTV-Enriched Campaign Execution

3.1 How KIKI Agent Works

3.2 Core Capabilities

Capability	Specification
LTV Prediction Latency	38ms median (p99 <95ms)
Prediction Accuracy	$R^2 = 0.91$ across all segments
Platforms Supported	14 (Meta, Google, TikTok, LinkedIn, YouTube, Snap, Pinterest, Amazon DSP, Reddit, DV360, X, TradeDesk, Criteo, AppNexus)
AI Agents	6 autonomous agents (Bidding, Creative, Pacing, Signals, SyncBrain, OaaS)
AI Routing	7 models via SyncBrain (GPT-4o, Claude, Gemini, LLaMA, etc.) — 12ms routing latency
Fraud Detection	99.2% detection rate, 0.03% false positive
Signal Processing	28-feature real-time enrichment pipeline
Dashboard Surfaces	42 operational dashboards
API Routes	75+ REST endpoints
Infrastructure	Azure Container Apps, PostgreSQL, Kafka

3.3 Key Differentiator: Fraud-Before-Enrichment

KIKI Agent is the only platform that performs IVT/fraud detection *before* LTV enrichment. This is critical because:

- If a fraudulent conversion is enriched with a high LTV prediction, the platform learns to optimise toward fraud
- Fraudulent traffic generates conversion signals that look identical to legitimate traffic at the event level
- KIKI's fraud engine scores each conversion on IP reputation, device fingerprint, and velocity analysis before enrichment occurs

This single architectural decision prevents model poisoning — a flaw present in every competing LTV enrichment solution.

4. Technology Architecture

4.1 Stack Overview

Layer	Technology	Purpose
Frontend	Next.js 15, React 18, Tailwind CSS, Zustand, TanStack Query	42-dashboard command centre
AI Fast Tier	Groq (Llama 3.1 8B)	Real-time bidding decisions (<200ms)
AI Mini Tier	Azure GPT-4o-mini	Classification, routing, summaries
AI Standard Tier	Azure GPT-4o	Complex reasoning, creative generation
Event Bus	Apache Kafka (14 topics, 82 event types)	Inter-agent communication
Database	PostgreSQL (Neon) + better-sqlite3 fallback	Multi-tenant data layer
Infrastructure	Azure Container Apps + ACR + Bicep	Auto-scaling, CI/CD
Auth	Custom JWT (jose library)	Token-based authentication
Real-time	Server-Sent Events (SSE)	Live dashboard updates

4.2 AI Agent Architecture

4.3 Performance Benchmarks

Operation	p50	p99	SLA Target
LTV prediction	38ms	95ms	<100ms
Fraud scoring	18ms	42ms	<50ms
CAPI enrichment + delivery	341ms (Meta)	412ms (TikTok)	<500ms
SyncBrain routing	12ms	28ms	<30ms

Operation	p50	p99	SLA Target
Groq bidding inference	180ms	420ms	<500ms
Dashboard page load	1.2s	3.4s	<4s
API response (p50)	45ms	180ms	<200ms

5. Product Overview

5.1 Dashboard Command Centre (42 Surfaces)

The product delivers 42 operational dashpages organised into 6 groups:

OVERVIEW (5)

- Command Centre (Home) — KPIs, active agents, quick actions
- Campaign Manager — CRUD, filtering, bulk operations
- Signal Stream — Real-time enriched event feed
- AI Agents — 6-agent registry, status, toggle, guardrails
- Guides — Interactive onboarding guides

INTELLIGENCE (7)

- SyncBrain™ — Full AI chat with 7-model routing
- Performance Analytics — Channel breakdown, funnel, period comparison
- Intelligence — AI-generated insights with confidence scores
- Competitive Intel — Benchmarking, CPM trends, market analysis
- Competitor Tracking — Domain monitoring, price drops, defensive actions
- Scenario Planner — What-if budget allocation
- Media Mix Modelling (MMM) — Bayesian adstock, channel contribution
- B2B Attribution — Pipeline-stage attribution for B2B advertisers

FINANCE (6)

- Wallet & Cards — Virtual card management, top-up, transaction history
- Billing — Subscription management, invoices, usage meters
- P&L Summary — Revenue trends, cost breakdown, profitability
- Channel Margins — CAC, LTV, margin per channel
- Catalog Margins — Product-level margin analysis
- Influencers — Creator ROI tracking, dark social measurement

OPERATIONS (8)

- OaaS Tasks — Automated task queue, approve/reject workflow
- Automation — Workflow builder, conditional rules
- Reports — Scheduled PDF exports, custom report builder
- Data Warehouse — Feature store, ML training data export

- Fraud & IVT — Threat summary, protection rules, detection logs
- Anomaly Alerts — Anomaly detection, severity distribution
- Commerce — Platform connections, catalog sync, product stats

CRM & CONTENT (4)

- CRM — Pipeline stages, lead scoring, segment analysis
- Creative Library — Asset management, CTR/conversion per creative
- Creative AI — AI copy generation, platform-specific variations
- Creative Attribution — Per-creative revenue and LTV attribution

SYSTEM (9)

- AI Ops — Model registry, experiment tracking, training pipeline
- Admin Health — Service status, capacity utilization, uptime
- Developer — API key management, webhook config, rate limits
- Audit Log — Filterable event log with severity tracking
- Notifications — Read/mark-read, severity-coloured alerts
- KYC — Entity verification, document tracking, compliance
- Consent & Privacy — Regional compliance, UID2, Privacy Sandbox
- Agency View — Multi-client campaign overview
- Settings — Account, integrations, security

5.2 Key Product Features

- **SyncBrain AI Chat:** Conversational interface routing through 7 AI models. Includes speech-to-text, language translation, and markdown rendering.
- **Real-Time SSE:** Every dashboard receives live event push via Server-Sent Events.
- **Onboarding Checklist:** Progressive, server-persisted onboarding flow.
- **Demo Data Seeding:** One-click demo environment with sample campaigns and signals.
- **Password Reset & Google SSO:** Enterprise-grade authentication.
- **Email Service:** Nodemailer-based transactional email (welcome, password reset) via SMTP.
- **Responsive Design:** Every page works at 320px–1920px width.

6. Market Analysis

6.1 Total Addressable Market

Segment	2026 Value	CAGR	2030 Value
Global digital ad spend	\$745B	11.3%	\$1.14T
Ad tech & bid management	\$18.2B	14.1%	\$30.8B
AI-powered ad optimisation	\$4.7B	32.4%	\$14.3B
Server-side CAPI/enrichment	\$1.1B	41.2%	\$4.4B

Source: Statista Digital Advertising Report 2026, Gartner Ad Tech Forecast Q2 2026, IDC AI in Advertising 2026.

6.2 Serviceable Addressable Market (SAM)

KIKI Agent targets:

Primary: Mid-market D2C Ecommerce (£10M–£250M GMV)

- UK: 2,400 companies
- EU: 5,800 companies
- US & ROW: 18,000 companies
- Total: ~26,000 potential customers

Secondary: Performance Marketing Agencies

- UK: 1,200 agencies managing £5M+ annual ad spend
- EU: 3,500 agencies
- US: 8,000 agencies
- Total: ~12,700 potential customers

SAM (Year 5 addressable): ~38,700 businesses

KIKI Target Share (Year 5): $800 / 38,700 = 2.1\%$

6.3 Serviceable Obtainable Market (SOM)

Year 1: 15 customers (0.04% penetration)

Year 2: 50 customers (0.13%)

Year 3: 150 customers (0.39%)

Year 4: 400 customers (1.03%)

Year 5: 800 customers (2.07%)

6.4 Market Trends

Tailwind 1: CAPI Mandates

Meta's Conversions API (CAPI) is now mandatory for all advertisers processing EU user data. Google Ads is following with enhanced conversions. Server-side event routing is no longer optional — every advertiser must implement it. KIKI provides the enrichment layer on top of this mandatory infrastructure.

Tailwind 2: Privacy Regulation

GDPR, ePrivacy, CCPA, and emerging AI regulation are eliminating third-party signals. Advertisers must extract more value from first-party data. LTV enrichment is the highest-leverage application of first-party data in the bidding loop.

Tailwind 3: AI in Ad Tech

AI-powered ad optimisation is the fastest-growing segment in ad tech (CAGR 32.4%). Platforms are competing on AI capabilities. KIKI's 6-agent architecture and 7-model SyncBrain router provide a differentiated AI proposition.

Tailwind 4: ROAS Compression

Return on ad spend has declined 22% across platforms since 2022 (Meta, Google, and TikTok investor

reports). Advertisers are actively seeking optimisation technology — the market is educated and motivated.

6.5 Customer Personas

Persona A: Head of Performance (D2C Brand)

- £20M–£200M GMV
- £2M–£20M annual ad spend
- 3–5 platforms active
- Pain: CPA rising, attribution unclear, manual bid management
- Budget: £1K–£5K/mo for optimisation tools

Persona B: Agency CEO / Media Director

- 20–200 clients
- £5M–£100M managed ad spend
- 5–10 platforms per client
- Pain: Scaling optimisation across clients, differentiating from competitors
- Budget: £2K–£10K/mo (agency-tier pricing)

Persona C: VP Marketing (Enterprise Brand)

- £250M+ GMV
- £10M+ annual ad spend
- In-house media team
- Pain: Ad platform limitations, data integration complexity
- Budget: £5K–£20K/mo + custom integration fees

7. Competitive Landscape

7.1 Competitive Matrix

Company	Category	LTV Enrichment	Multi-Agent AI	14 Platforms	Fraud-First	Real-Time Arbitrage	Starting Price
KIKI Agent	AI Campaign Execution	✅ (38ms, R ² =0.91)	✅ 6 agents	✅ 14	✅ Before enrich	✅ Cross-platform	£599/mo
Google Ads Smart Bidding	Platform-native	❌ (platform only)	❌	❌ Google only	❌	❌	Free (with spend)
Meta Advantage+	Platform-native	❌ (platform only)	❌	❌ Meta only	❌	❌	Free (with spend)
Adobe Experience Cloud	Enterprise DMP	Partial	❌	Partial	❌	❌	~\$5K/mo+

Company	Category	LTV Enrichment	Multi-Agent AI	14 Platforms	Fraud-First	Real-Time Arbitrage	Starting Price
Smartly.io	Creative + Bidding	✗	Partial	✓ 8	✗	✗	~\$2K/mo
Albert AI	AI Bidding	✗	Partial	Partial	✗	✗	~\$3K/mo
Revealbot	Automation	✗	✗	✓ 5	✗	✗	~\$500/mo
AdRoll	Full-funnel	Partial	✗	✓ 4	✗	✗	~\$1K/mo
Madgicx	AI Bidding	✗	Partial	✓ 5	✗	✗	~\$400/mo

7.2 Competitive Moats

Moat 1: Prediction Latency — 38ms

Competing LTV models (Adobe, Salesforce, custom-built) typically run in batch processes with 12–48 hour latency. KIKI's 38ms prediction runs inside the CAPI response window, meaning enrichment happens before the platform receives the event.

$$[\text{Time advantage}] = \frac{\{\text{Competitor batch latency (24h)}\}}{\{\text{KIKI latency (38ms)}\}} = 2,273,684 \times$$

No competitor operates at sub-100ms LTV inference for real-time bidding optimisation.

Moat 2: Fraud-Before-Enrichment Architecture

Every competing platform enriches first and detects fraud later (or not at all). KIKI's architecture detects and blocks IVT *before* the LTV prediction runs. This prevents model poisoning — a catastrophic failure mode where the bidding model learns to optimise toward fraudulent traffic because it carries high enriched values.

Moat 3: Multi-Agent Cross-Optimisation

Competitors offer single-purpose tools (bid adjustment, creative testing, analytics). KIKI's six agents operate as a unified system — the Bidding Agent can trigger the Creative Agent to generate replacements when fatigue is detected, which triggers the OaaS Agent to schedule deployment.

Moat 4: Platform Breadth

14 connectors mean KIKI provides a single control plane. Competing solutions cover 2–8 platforms. Enterprise customers managing 8–12 platforms need a unified system.

Moat 5: Real-Time Arbitrage

KIKI monitors competitor pricing and creative fatigue across platforms in real time. When a competitor drops prices on Meta, KIKI can shift budget to Google or TikTok within the same bidding cycle. No competitor offers cross-platform, event-driven budget arbitrage.

7.3 Barriers to Entry

- 1. **Model training data:** KIKI's LTV ensemble model requires 24+ months of conversion data across platforms. A new entrant cannot bootstrap this without significant customer acquisition or synthetic data generation.
- 2. **Platform connector maintenance:** Each of the 14 ad platform APIs requires ongoing maintenance (Meta's CAPI API changed 7 times in 2025). The operational burden is substantial.
- 3. **Infrastructure complexity:** Real-time Kafka event bus + multi-model AI routing + sub-second SLAs on Azure Container Apps is non-trivial to replicate.
- 4. **Regulatory compliance:** UK GDPR, ICO registration, and platform-specific data processing agreements take 6–12 months to establish.

8. Business Model

8.1 Revenue Streams

Stream	Type	Description	Year 1 Mix	Year 5 Mix
Platform Subscription	Recurring (monthly)	Tiered access to platform features	82%	70%
AI Usage Overage	Usage-based (metered)	Per-decision and per-enrichment overage	10%	18%
Creative Generation	Usage-based (per bundle)	AI-generated copy + image prompts	3%	5%
Professional Services	One-time	Onboarding, custom integration, training	5%	2%
API Access (Future)	Usage-based	Third-party API access to LTV engine	0%	5%

8.2 Pricing Tiers

Feature	Growth	Scale	Enterprise
Price	£599/mo	£1,799/mo	From £4,999/mo
Platforms	1	Up to 5	All 14
Campaigns	3	Unlimited	Unlimited
AI Decisions/mo	25,000	100,000	Custom
Enriched Signals/mo	10,000	50,000	Custom
SyncBrain AI Chat	✓	✓	✓ + custom model
Creative Fatigue Detection	✗	✓	✓
Auto-Generated Creatives	✗	✓	✓

Feature	Growth	Scale	Enterprise
Fraud Detection	✓	✓	✓ + custom rules
SSO (Google)	✗	✓	✓ + SAML/Entra
API Access	Read-only	Full API	Full API + SLA
Support	Email (48h)	Email + Chat (8h)	Dedicated (4h)
SLA	99.5%	99.9%	99.95%

8.3 Unit Economics

Metric	Year 1	Year 3	Year 5
Average Revenue Per Customer (ARPU)	£950/mo	£1,500/mo	£1,900/mo
Gross Margin	82%	87%	88%
Customer Acquisition Cost (CAC)	£3,200	£2,400	£2,000
LTV (3-year)	£23,400	£39,960	£50,544
LTV:CAC Ratio	7.3×	16.7×	25.3×
Monthly Churn	4.5%	2.2%	1.5%
Annual Net Revenue Retention	105%	118%	125%
Payback Period (months)	4.2	2.8	2.1

8.4 Revenue Model Rationale

- **Low base price (£599):** Reduces friction for mid-market adoption. Advertisers spending £2K–£20K/mo on ads can trial KIKI without significant commit.
- **Usage-based overage:** Aligns pricing with value delivered. High-LTV customers generate more signals, pay more, but receive proportionally more value.
- **Enterprise tier:** Custom pricing for large advertisers ensures KIKI captures appropriate value share while remaining competitive against Adobe (\$5K+) and Smartly.io (\$2K+).

9. Go-to-Market Strategy

9.1 Phase 1: Founder-Led Sales (Year 1)

Channel: Direct outreach + founder network

Target: 15 UK-based D2C brands

Method:

- Personal outreach via LinkedIn and industry events
- Free 30-day pilot with onboarding support

- Performance guarantee: if LTV uplift < 2× in pilot, first 3 months free
Budget: £6K (events, travel, content)

9.2 Phase 2: Inside Sales + Partnerships (Year 2)

Channel: 1 BDM (hired Month 6) + agency partnerships

Target: 50 customers (35 direct, 15 agency resale)

Method:

- Tier 1: Direct outbound to ecommerce CMOs
- Tier 2: Agency partnerships (white-label / reseller)
- Tier 3: Referral programme (1 month free per referral)

Budget: £24K + BDM salary

9.3 Phase 3: Scalable Growth (Year 3+)

Channel: Inbound + content + paid + partnerships

Target: 150+ customers

Method:

- Content marketing: Technical blog, case studies, ROI calculators
- Paid: LinkedIn + Google Ads targeting ad tech buyers
- Product-led: Self-serve onboarding, free trial (14 days)
- Channel: Ad platform partner programmes (Meta Business Partners, Google Partners)

Budget: £60K + 2 SDRs + content marketer

9.4 Pricing & Packaging Strategy

- **Anchor pricing:** Enterprise tier listed as "From £4,999/mo" — makes Scale tier (£1,799) feel accessible
- **Free trial:** 14-day full-feature trial for Growth plan (no credit card)
- **Annual discount:** 2 months free when paid annually (16.7% discount)
- **Referral:** 1 month credit per referred customer who converts

10. Financial Projections

10.1 Key Assumptions

Assumption	Year 1	Year 2	Year 3	Year 4	Year 5
Customers (Start)	0	15	50	150	400
Customers (End)	15	50	150	400	800
Average Customers (weighted)	8	32	100	275	600
ARPU (monthly, incl. overage)	£950	£1,300	£1,500	£1,700	£1,900
Monthly Churn	4.5%	3.0%	2.2%	1.8%	1.5%

Assumption	Year 1	Year 2	Year 3	Year 4	Year 5
Annual Net Revenue Retention	105%	112%	118%	122%	125%
Gross Margin	82%	85%	87%	88%	88%

10.2 Revenue Build (Monthly Detail – Year 1)

Month	New Customers	Churned	Total Paid	MRR	Cumulative Revenue
Jan	1	0	1	£0 (pilot)	£0
Feb	1	0	2	£0 (pilot)	£0
Mar	1	0	3	£0 (pilot)	£0
Apr	2	0	5	£2,850	£2,850
May	2	0	7	£6,650	£9,500
Jun	2	0	9	£8,550	£18,050
Jul	2	0	11	£10,450	£28,500
Aug	2	1	12	£10,450	£38,950
Sep	3	0	15	£14,250	£53,200
Oct	2	1	16	£15,200	£68,400
Nov	2	0	18	£17,100	£85,500
Dec	0	0	18	£17,100	£102,600

Year 1 Revenue: £102,600

Overage & Creative Fees: £10,000

Year 1 Gross Revenue: £112,600

10.3 Annual Financial Summary

Item	Year 1	Year 2	Year 3	Year 4	Year 5
Revenue					
Subscription	£91,200	£448,500	£1,620,000	£5,100,000	£12,540,000
Overage/Usage	£10,000	£42,000	£150,000	£420,000	£960,000
Creative Generation	£6,400	£27,000	£90,000	£210,000	£420,000
Professional Services	£5,000	£7,500	£15,000	£30,000	£60,000
Total Revenue	£112,600	£525,000	£1,875,000	£5,760,000	£13,980,000
Cost of Revenue					
Azure Hosting & Infra	£30,000	£60,000	£144,000	£300,000	£540,000

Item	Year 1	Year 2	Year 3	Year 4	Year 5
AI API (Groq + OpenAI)	£6,000	£24,000	£72,000	£180,000	£360,000
Stripe Payment Fees	£3,300	£15,200	£54,400	£167,000	£405,000
Data Egress & CDN	£1,200	£3,600	£7,200	£14,400	£24,000
Total Cost of Revenue	£40,500	£102,800	£277,600	£661,400	£1,329,000
Gross Profit	£72,100	£422,200	£1,597,400	£5,098,600	£12,651,000
Gross Margin	64%	80%	85%	88%	90%
Operating Expenses					
Engineering (Salaries + Contractor)	£0	£35,000	£210,000	£420,000	£720,000
Sales & Marketing (Salary + Budget)	£6,000	£54,000	£180,000	£360,000	£540,000
G&A (Legal, Accounting, Insurance)	£15,500	£22,000	£33,000	£55,000	£82,000
Founders' Salary	£0	£15,000	£120,000	£200,000	£240,000
Software & Tools	£24,000	£36,000	£60,000	£96,000	£180,000
Travel, Events, Office	£3,000	£10,000	£25,000	£50,000	£90,000
Total OpEx	£48,500	£172,000	£628,000	£1,181,000	£1,852,000
EBITDA	£23,600	£250,200	£969,400	£3,917,600	£10,799,000
EBITDA Margin	21%	48%	52%	68%	77%
Capital Expenditure	£3,000	£8,000	£15,000	£25,000	£40,000
Free Cash Flow	£20,600	£242,200	£954,400	£3,892,600	£10,759,000
Cumulative Cash	£20,600	£262,800	£1,217,200	£5,109,800	£15,868,800

10.4 ARR Trajectory

Year	Exit ARR	YoY Growth
1	£205,200	—
2	£780,000	280%
3	£2,700,000	246%
4	£8,160,000	202%
5	£18,240,000	124%

10.5 Funding Requirements

Round	Amount	Timing	Dilution	Use of Funds
Pre-Seed	£350K	Q3 2026	15%	12-month runway: 1 engineer, sales, legal, infra
Seed	£1.5M	Q3 2027	15–20%	18-month runway: scale team, EU expansion, self-serve
Series A	£5M	Q3 2029	15–20%	US expansion, enterprise sales, platform R&D

Exit ARR targets at each round:

- Pre-Seed to Seed: £205K → £780K (proving repeatable sales)
- Seed to Series A: £780K → £8.1M (proving scalable growth)
- Series A onward: £8.1M → £18.2M+ (proving market leadership)

10.6 Sensitivity Analysis

Scenario	Year 5 ARR	Year 5 EBITDA	Outcome
Base Case	£18.2M	£10.8M	Profitable company, strong exit candidate
Upside (+20% growth)	£26.3M	£15.4M	Accelerated timeline, Series A at Year 3
Downside (-30% growth)	£8.7M	£4.2M	Still profitable, fund from revenue
Worst (churn 2×)	£4.1M	£1.1M	Breakeven, requires cost-cutting

11. Team & Advisors

11.1 Current Team

Role	Person	Status	Notes
Founder, Product & Technology	Ariyo Dolapo	Full-time	10+ years digital industry. Built entire platform (v2.0.0) solo
—	—	—	—

Ariyo has single-handedly:

- Architected and built 75+ API routes across 30+ service domains
- Developed 6 AI agents with multi-tier routing (Groq, GPT-4o, GPT-4o-mini)
- Designed and built 42 dashboard surfaces with responsive UI
- Deployed production infrastructure on Azure (Container Apps, ACR, CI/CD)
- Integrated 14 ad platform connectors with real-time CAPI delivery
- Implemented Kafka event bus with 82 event types across 14 topics
- Built custom JWT auth, onboarding persistence, password reset, SSO
- Maintained 146 passing tests with 0 TypeScript errors

11.2 Seeking: UK Co-Founder (Operations & Revenue)

See Section 12 (Co-Founder Strategy) and Document 07 (Co-Founder Role Scope) for full details.

11.3 Hiring Roadmap

Role	Timeline	Location	Salary Range
UK Co-Founder (Operations & Revenue)	Q3 2026	UK (London / Remote)	Sweat equity until funded
Senior Full-Stack Engineer	Q1 2027 (post-pre-seed)	Remote UK	£60K–£80K
Business Development Manager	Q1 2027	UK (London)	£40K–£55K + commission
Customer Success Manager	Q3 2027	UK	£35K–£50K
Junior Engineer	Q4 2027	Remote UK	£35K–£50K
Content Marketing Lead	Q1 2028	UK / Remote	£40K–£55K

12. Co-Founder Strategy

12.1 Why a UK Co-Founder

KIKI Agent is a UK-domiciled company (STOREGRILL INC LTD). While the product is global (US cloud infrastructure, multi-currency pricing), the founding team needs UK operational presence for:

1. **UK entity management:** Companies House filing, VAT, PAYE, statutory accounts
2. **UK GDPR compliance:** ICO registration, Data Protection Officer, breach reporting
3. **UK investor access:** SEIS/EIS schemes require UK-resident company, UK angel investors prefer UK-based founders
4. **UK customer acquisition:** First 15 customers will be UK D2C brands — local network matters
5. **UK banking and payments:** Stripe UK, Wise Business, UK bank accounts for payroll

12.2 Ideal Co-Founder Profile

Attribute	Requirement
Experience	5+ years in ad tech, martech, or SaaS sales/operations
Network	Existing relationships with UK D2C or agency decision-makers
Location	UK-based (London preferred, remote within UK acceptable)
Commitment	Full-time from day one
Capital	Sweat equity only (no capital requirement)
Skills	Sales pipeline management, fundraising, compliance, operations
Domains	Understanding of digital advertising, CAPI, attribution preferred

12.3 Co-Founder Equity Proposal

Component	Detail
Equity	20% fully diluted
Vesting	4-year, 1-year cliff
Salary	£0 until £300K ARR or Seed round
Role	COO / Commercial Director

12.4 Co-Founder First 90 Days

Week	Deliverable
1–2	Term sheet agreed, due diligence, solicitor engagement
3–4	Incorporate KIKI Agent Ltd, open bank account, register with ICO
5–6	Set up accounting (Xero/FreeAgent), insurance (PI, cyber)
7–8	First 10 customer outreach sequences written and deployed
9–10	SEIS/EIS advance assurance application submitted
11–12	First signed customer or pilot agreement

13. Risk Analysis & Mitigation

Risk	Probability	Impact	Mitigation
Platform API changes	High (100% — Meta changes API 7×/year)	Medium	Abstraction layer, automated regression testing, 14-platform breadth reduces single-platform dependency
AI model cost escalation	Medium	High	Multi-model routing (SyncBrain) always selects cheapest adequate model; caching layer for repeated inferences
Customer churn > 5%/mo	Medium	High	Annual contracts with 2-month discount; net revenue retention via expansion revenue (more platforms, more signals)
GDPR enforcement action	Low	Critical	ICO registration, DPO, DPIA, Data Processing Agreements, UK data residency via Azure UK regions
Co-founder conflict	Medium	High	Founders' Agreement with dispute resolution escalation; defined decision rights and domains
Unable to raise pre-seed	Medium	High	Lean operations — breakeven possible at 15 customers (£112K revenue vs £89K costs)
Large competitor builds similar product	Low	High	38ms latency moat; fraud-before-enrichment architecture; 14 connectors; 42 dashboard surfaces — 18+ month replication time

Risk	Probability	Impact	Mitigation
Cloud infrastructure outage	Low	Medium	Multi-region Azure deployment; PostgreSQL with read replicas; Kafka with 3-broker cluster

14. Fundraising Plan

14.1 Pre-Seed Round (£350K – Q3 2026)

Investor Target: UK angels, Seedcamp, Entrepreneur First, ad-tech angels

Use of Funds	Amount
Engineering (1 senior full-stack, 12 months)	£80,000
Sales & Marketing (BDM hire Month 6 + budget)	£55,000
Legal & Compliance (incorporation, GDPR, IP)	£25,000
Cloud Infrastructure (Azure, AI APIs, 12 months)	£60,000
Founder living expenses (12 months, 2 founders)	£60,000
Reserve & Contingency	£70,000
Total	£350,000

Valuation rationale: £1.8M–£2.2M pre-money

- Product already built and deployed (v2.0.0) — de-risks technology
- 15% dilution for £350K
- SEIS-eligible: UK angels receive 50% income tax relief

14.2 Seed Round (£1.5M – Q3 2027)

Timing trigger: £500K+ ARR, 30+ customers, repeatable sales motion proven

Lead investor: UK seed fund (LocalGlobe, Episode1, M&G) or US fund expanding to UK

14.3 Key Fundraising Metrics by Stage

Metric	Pre-Seed (£350K)	Seed (£1.5M)	Series A (£5M)
ARR at raise	£0–£50K	£500K–£1M	£5M–£8M
Customers	5–18	30–65	200–400
Monthly Growth	N/A	8–12%	5–8%
Gross Margin	64%	80%	88%
Net Revenue Retention	105%	112%	122%
CAC Payback	4.2 mo	2.8 mo	2.1 mo

Metric	Pre-Seed (£350K)	Seed (£1.5M)	Series A (£5M)
LTV:CAC	7×	16×	25×

15. Exit Strategy

15.1 Primary Exit Pathways

Pathway	Timeline	Typical Multiple	Likely Acquirers
Strategic Acquisition	Year 4–6	8–12× ARR	Salesforce (via Marketing Cloud), Adobe (via Experience Cloud), Meta (ad tech acquisition history), Google, SAS, WPP, Publicis
PE Growth Buyout	Year 5–7	5–8× EBITDA	Vista Equity, Hg Capital, TA Associates
IPO	Year 7–10	N/A	Requires £100M+ ARR

15.2 Acquisition Rationale

For an ad platform (Meta, Google, TikTok):

KIKI provides LTV enrichment that makes their platforms more effective. Meta would acquire KIKI to offer native LTV enrichment to all advertisers — increasing overall platform ROI.

For an enterprise software company (Salesforce, Adobe, SAS):

KIKI fills the "bid execution with AI" gap in their marketing clouds. Salesforce Marketing Cloud has no native bidding capability. Adobe has no real-time CAPI enrichment layer.

For a holding group (WPP, Publicis, Omnicom):

Agency holding groups need proprietary technology to differentiate their offerings. KIKI provides a white-label capable platform that agencies can run client campaigns on.

15.3 Return Scenarios (to Seed Investors)

Exit Type	Exit ARR	Exit Value	Investor Return (15% ownership)
Small acquisition	£5M	£40M (8× ARR)	£6M (4× on £1.5M)
Strategic acquisition	£10M	£100M (10× ARR)	£15M (10×)
Large acquisition	£18M	£216M (12× ARR)	£32.4M (22×)
IPO	£50M+	£500M+	£75M+

16. Appendix

16.1 Product Screenshots

16.3 Legal Structure

```

STOREGRILL INC LTD
├── KIKI Agent™ (trading name / product)
│   └── KIKI Agent Ltd (UK subsidiary – to be incorporated)

```

16.4 Glossary

Term	Definition
ARR	Annual Recurring Revenue
ARPU	Average Revenue Per User
CAP	Conversions API (Meta's server-side event tracking)
CPA	Cost Per Acquisition
DPO	Data Protection Officer
EBITDA	Earnings Before Interest, Tax, Depreciation, Amortisation
EMI	Enterprise Management Incentive (UK tax-advantaged share options)
ESOP	Employee Share Option Plan
IVT	Invalid Traffic (ad fraud)
LTV	Lifetime Value (customer)

Term	Definition
MRR	Monthly Recurring Revenue
ROAS	Return On Ad Spend
SEIS	Seed Enterprise Investment Scheme (UK tax relief for angel investors)
SyncBrain	KIKI's multi-model AI routing engine
