5. Tone of Voice

5.1 Principles

Principle	Description
Precise	Use exact numbers, not approximations. "38ms" not "~40ms". "R ² =0.91" not "very accurate".
Technical	Assume the reader understands ad tech. Use correct terminology (CAPI, LTV, IVT, SyncBrain).
Confident	State facts without hyperbole. "KIKI predicts 90-day LTV in 38ms" not "KIKI revolutionises prediction with blistering speed".
Direct	Short sentences. Active voice. "Bid optimisation becomes a race to the bottom" not "It can be observed that bid optimisation..."

5.2 Do & Don't

Do	Don't
"Your £149 order becomes a £639 signal."	"Unlock the hidden potential of your customer data with our AI-powered platform!"
"Six autonomous AI agents execute within your guardrails."	"Our cutting-edge AI agents work tirelessly to optimise your campaigns."
"38ms LTV prediction. R ² =0.91. 4.29× average uplift."	"Lightning-fast predictions with industry-leading accuracy."
