Your £149 Order Becomes a £639 Signal.

KIKI Agent enriches every conversion with a predicted 90-day LTV before it reaches your ad platform. Your bidding algorithm stops optimising toward transaction value and starts optimising toward customer worth.

How It Works

Checkout → KIKI intercepts → Fraud scan (18ms) → LTV prediction (38ms) → Enriched signal sent to Meta/Google/TikTok

The Result

- **4.29× average LTV uplift** — the platform sees the full customer value
- **38ms prediction latency** — fast enough to run before the platform receives the event
- **R² = 0.91 model accuracy** — reliable predictions across all segments
- **99.2% fraud detection** — IVT blocked before enrichment (competitors enrich first, then detect fraud — their models learn to optimise toward bots)

14 Platforms. One Control Plane.

Meta	Google	TikTok	LinkedIn	YouTube	Snapchat

Why KIKI Agent?

1. **Fraud-before-enrichment architecture** — Unique. Prevents model poisoning.
2. **38ms LTV prediction** — Competitors run batch processes with 12–48 hour latency. KIKI runs in real time, inside the CAPI window.
3. **6 autonomous AI agents** — Not a single model. A cross-optimising system of Bidding, Creative, Pacing, Signals, SyncBrain, and OaaS agents.
4. **Multi-platform arbitrage** — When one platform underperforms, KIKI shifts budget before you notice.
5. **42-dashboard command centre** — Not an API. A full product with AI chat, analytics, fraud monitoring, and creative management.
